

Transparency of the sustainability policies

The advisory activity addressed to clients and each stage of the activity carried out by the Company in its recruitment of clients will be carried out in line with the provisions set out in EU Regulation 2088/2019 (SFDR).

Pursuant to Article 4.5 of the aforementioned Regulation, the Company shall publish and update on its website and in the pre-contractual disclosure:

- a) information indicating whether, taking due account of the size, nature and scale of its activities and type of financial products on which it provides advice, it takes into consideration the main adverse effects on sustainability factors in the investment advisory activity; or
- b) information on the reasons why it does not consider, in the investment advisory activity, the adverse effects of investment decisions on sustainability factors and, where appropriate, information concerning whether and when it intends to consider such adverse effects.

Family Cube Partners SCF Srl initially decided to adopt option b) under Article 4.5 of Regulation (EU) 2088/2019 and, as a result, it is not going to consider the negative effects of investment decisions on sustainability factors in its investment advisory service.

The reason for this choice is that the Company believes that the legal and regulatory framework governing transparency on matters concerning Information on policies on the integration of sustainability risks into investment decision-making processes is still partly incomplete.

In addition, the availability of data on the sustainability factors of financial instruments is insufficient, to date, as the information on financial instruments is still incomplete and nonhomogeneous, thus not suitable for a comprehensive assessment of the negative effects of investment decisions on sustainability factors.

Family Cube Partners SCF Srl will evaluate in the future to consider the negative effects of investment decisions on sustainability factors when the relevant regulations will be finalized and when data on the sustainability of financial instruments will be sufficiently widespread and available.
